

Priming HFA Inhalers

All HFA Inhalers should be Primed before using the first dose. This is done by spraying the pump in the air away from the face **4 times**.

The HFA Inhalers should also be primed again if the inhaler has not been used for **2 weeks** or has been dropped.

The HFA Inhalers that are included are:
Ventolin, Proair, Proventil, Flovent, Advair and
Symbicort

EXCEPTIONS:

Xopenex needs to be primed every 3 days if inhaler has not been used and Maxair needs to be primed every 2 days if inhaler has not been used.
